

What are *Diabetes Care*'s policies regarding open access?

Beginning with the July 2008 issue, all articles published in *Diabetes Care* will be deposited in PubMed Central, a repository of peer-reviewed research maintained by the National Institutes of Health. ADA is providing this service at no cost to authors. Articles will be accessible on PubMed Central 12 months after the date of final print/online publication in *Diabetes Care*.

For articles required to be deposited/accessible earlier than 12 months, authors are permitted to submit the final, accepted version of their *manuscript* to their funding body, such as NIH, or institution for inclusion in that funding body or institution's database, archive, or repository or to post the final, accepted version on their personal Web site. The accepted manuscript may be made freely accessible to the public upon acceptance, provided that the following conditions are observed:

- Post-prints must include the following **statement of provenance**: "This is an author-created, uncopyedited electronic version of an article accepted for publication in *Diabetes Care*. The American Diabetes Association (ADA), publisher of *Diabetes Care*, is not responsible for any errors or omissions in this version of the manuscript or any version derived from it by third parties. The definitive publisher-authenticated version will be available in a future issue of *Diabetes Care* in print and online at <http://care.diabetesjournals.org>."
- Once the final version has been published in the journal, a link to the final published version of the paper on the journal's Web site must be posted.
- The version of the manuscript deposited or posted must be identical to the final accepted version, with the exception of the addition of the above statement and any changes necessary to correct errors. Authors may make changes to the posted version to correct mistakes or may issue an erratum at any time. However, the final published version of the manuscript may not be deposited, posted, or later substituted for the post-print.
