

Diabetes Care

Impact Factor

The 2007 impact factor for *Diabetes Care* is 7.851, ranked 4th of 92 publications in the field of endocrinology/metabolism and 3rd among journals publishing original research in that field.

Impact factor is a measure of the frequency with which the “average” article in a journal has been cited in a particular year; it is calculated as the number of current citations of articles published in the journal during the previous two years divided by the number of articles published in the journal during the previous two years.

Immediacy Index

In 2007, *Diabetes Care* received 35,824 total cites and published 591 articles, the 6th highest totals of 92 endocrinology/metabolism journals. Its immediacy index is 1.377.

Immediacy index measures the average number of times that an article, published in a specific year within a specific journal, is cited over the course of the same year.

EigenFactor

In 2006, *Diabetes Care* ranked 4th in eigenfactor, a measure of the overall value provided by all of the articles published in a given journal in a year, among 95 endocrinology/metabolism journals. It ranks 7th in article influence, a measure of a journal’s prestige based on per-article citations. (The most recent available data are for 2006.)

Eigenfactor is an estimate of the percentage of time that library users spend with that journal. See <http://www.eigenfactor.org/methods.htm> for more information. Source: EigenFactor.org

Submissions

In 2007, *Diabetes Care* received 2,390 first submissions, and the average time from submission to initial decision was 23 days.

Accepted Articles
